Research Details :

Research Title	: _
	تقديرات النماء للمشتقة النونيةلحاصل ضرب بلاشكي
Descriptipn	: Let be a sequence of nonzero points in the open unit disk satisfying Then the product known as the Blaschke product, represents a bounded analytic function in and has zeros only at the points This thesis consists of three chapters: The literature of Blaschke products is extensive, so, in Chapter 1, we survey and give a brief review to some background of Blaschke products. Chapter 2 is devoted to Lindens results [1] about the extention of the work of Protas [2]. In his work Linden generalized the results of Protas to consider higher order derivatives of Blaschke products. The purpose of Chapter 3 is to comment on Kutbi work [8], in which he extended Lindens results [1]. He obtained estimates of the integral means showing that as when Counterexamples are constructed by him to indicate that the estimates are essentially best possible
Research Type	: Master
Research Year	: 2006
Publisher	: KAAU
Supervisor	: د: مروان بن أمين كتبي
Added Date	: Wednesday, June 11, 2008
